

Follow the approved direction. Correct the execution.

Direct implementation instruction for the next homepage revision. This is not another design exploration.

IMPLEMENTATION BASIS

1. Brand, Website Direction & Implementation Guide - Revision 4
2. D'Life Visual System & Prototype Reference

Why this correction report is necessary

WHAT D'LIFE APPRECIATES

D'Life recognises that this was the first homepage prototype and that an early prototype may not yet be complete or polished. D'Life also appreciates thoughtful additions beyond the original request, including the green loading screen, D'Life logo reveal, soft transition into the hero and custom desktop cursor. These details show useful initiative and may be retained where they support usability and the approved brand direction.

EFFORT MUST ADVANCE THE APPROVED DIRECTION

D'Life values effort when it is used to realise, refine and strengthen the approved books and prototype direction. Effort spent creating treatments outside that baseline creates avoidable rework instead of moving the website forward. The approved visual references are expected to be followed, brought to life and improved through careful implementation.

WHY D'LIFE IS CONCERNED

Before the prototype was prepared, Edge Point had already received two detailed approved books covering the website purpose, visitor priorities, homepage architecture, typography, colour direction, section hierarchy, responsive expectations and prototype references. The books allowed professional refinement where a genuine UX, accessibility, responsive, WordPress, maintainability or technical reason existed, and D'Life expected meaningful departures to be supported by a clear explanation. That explanation was not provided, and several central concepts and treatments were not carried through clearly. Given the extensive materials already supplied, the submission created serious concern about whether the two approved books had been fully reviewed, understood and respected during the design process.

WHAT CHANGES FROM THIS CORRECTION STAGE ONWARD

The project now moves into controlled implementation. Edge Point is expected to follow the approved baseline rather than reopen or reinterpret the concept. First try to resolve and implement the approved treatment properly. If a genuine UX, accessibility, mobile, WordPress, maintainability or technical constraint remains, raise it immediately when identified, explain the issue and proposed solution, and obtain D'Life approval before changing the treatment.

The next stage must focus on disciplined, polished implementation. Initiative is welcome when it strengthens the approved direction, not when it replaces it.

Implement the approved baseline. Do not re-explore it.

IMPLEMENT, DO NOT RE-EXPLORE

Follow the approved Visual Book as the implementation baseline. Additional concepts or replacement layouts are not requested.

PHOTOGRAPHY STATUS

All current photography remains provisional. Approval of a section does not approve its current image.

BEFORE WORK CONTINUES

Review both approved books. Raise every unclear item, genuine UX issue, accessibility issue, mobile constraint, WordPress limitation or technical concern before implementation.

CONTACT D'LIFE FIRST

Explain the issue and proposed solution before changing an approved treatment. Do not wait until the next prototype presentation.

No additional concept work, replacement layout or related fee is authorised unless D'Life approves it in writing beforehand.

Use only the approved Lora and Work Sans system.

LORA - MAIN EDITORIAL FONT

Lora Semibold 600: hero and main section headings.
Lora Medium 500: supporting editorial emphasis.
Do not introduce another display family.

WORK SANS - BODY AND INTERFACE

Use Work Sans for body copy, navigation, labels, buttons, cards, FAQs and footer text. Follow the exact hierarchy shown in the approved Visual Book.

SITE-WIDE RULES

- Do not bold a full body sentence or random words inside normal copy.
- Do not change font family halfway through a sentence.
- Do not use tiny decorative italics as a substitute for hierarchy.
- Use size, spacing and alignment to create emphasis.
- The opened menu must use the same approved type system.

FOLLOW THE APPROVED TYPE SYSTEM EXACTLY. Do not change Lora, Work Sans, their approved roles or hierarchy unless a genuine UX, accessibility, mobile, WordPress or technical issue is raised with D'Life and approved before implementation.

This is a website, not a presentation.

THE APPROVED BOOKS ALREADY ADDRESS THIS ISSUE

The approved books require clear interface reading, consistent typography roles and emphasis created through scale, spacing, grouping and layout rather than styling individual words inside a sentence.

WHY THE CURRENT TREATMENT DOES NOT WORK

The mixed-font, decorative-italic and selective-bold treatment used in the current prototype may create visual drama on a presentation slide, but on a website it weakens clarity at first glance. Visitors should immediately understand the section identity, main message and next action. They should not need to decode why one word suddenly changes font family, becomes italic or appears heavier than the rest of the sentence.

WHY THIS IS A SERIOUS CONCERN

Because this requirement was clearly stated in the approved books, its repeated appearance in the prototype raises a serious concern about whether the typography and hierarchy guidance was fully reviewed and applied.

Use the approved Lora and Work Sans system exactly. Emphasis must come from hierarchy, not from styling individual words.

Keep the opening format. Correct the hierarchy and unfinished effects.

REQUIRED CORRECTIONS

- Make D'Life identity clearly visible.
- Reduce the headline scale so it supports the brand.
- Use the approved Lora and Work Sans roles.
- Improve contrast for the advisory label and body copy.
- Remove the rectangular shadow or backing block behind 'REAL SUPPORT'.
- Prevent mobile navigation and CTA crowding or clipping.
- Final photography remains subject to Sharon's approval.

KEEP: green opening screen, D'Life logo reveal and soft transition into the hero. Refine timing if needed, but do not remove the identity treatment without discussion.

Use the approved sequence. Keep D'Life's right to direct future changes.

01 Header and navigation

02 Hero

03 Small centred Choose Your Path selector

04 Trust proof

05 Larger visual life-needs section

06 Existing-policy guidance

07 Founder story

08 Featured videos

09 Grow With D'Life

10 DVA

11 Youth Community

12 FAQ

13 Closing CTA

14 Footer

Do not rearrange, remove, combine or otherwise change the approved sequence or section treatment without D'Life approval. Refer directly to both approved books for the purpose, hierarchy, spacing and treatment of every section. If a genuine UX, accessibility, mobile, WordPress or technical constraint may require a change, raise it with D'Life before changing the design, explain the issue and proposed solution, and proceed only after approval.

Remove duplication. Restore the route. Define the trust proof.

REMOVE 'WHAT WE ACTUALLY DO'

Remove the entire manifesto section. It repeats the hero and delays the visitor journey.

RESTORE THE SMALL CENTRED SELECTOR

Restore the compact Choose Your Path selector shown in the approved Visual Book. Keep it quick to scan and separate from the larger visual life-needs section.

TRUST SECTION: SIX APPROVED PROOF THEMES

Keep the section early, compact and evidence-led. Use these six themes as the content direction:

01 27 YEARS

EXPERIENCE

Guiding families through changing markets, life stages and financial decisions with trusted advice for over 27 years.

02 AIA

TRUSTED PRINCIPAL

Proudly partnering with AIA, one of Asia's leading insurers, while receiving recognition for professional excellence and client service.

03 MILLION DOLLAR AGENCY

MDRT BUILDER

Consistently achieving Million Dollar Agency recognition since 2002 and appointed as an MDRT Builder, developing high-performing financial professionals to international standards.

04 LEADERSHIP

PEOPLE DEVELOPMENT

Built 4 top-tier Senior Managers (District Managers) and 34+ young, passionate leaders (Unit Managers and Assistant Unit Managers) through systematic training and a culture of continuous growth.

05 CLIENTS

PEOPLE FIRST

People come before products. Every recommendation begins with meaningful conversations, understanding individual needs and giving advice only when it genuinely creates value.

06 CLAIMS

REAL SUPPORT

Successfully assisting clients with insurance claims exceeding RM __ million, with trusted guidance and dedicated support throughout the process.

Use these six directions as the approved trust-section content basis. Exact figures, award wording, evidence, permissions and the final RM claims amount remain subject to D'Life verification before publication.

Current defect: the page makes visitors work through the image sequence.

WHAT IS HAPPENING

- Normal downward scrolling is taken over by sideways movement.
- The movement starts before each card is fully readable.
- Part of the image and description remain cut off until the sequence is nearly complete.
- Visitors must view the image sequence before they can compare the available paths.

The starting point is wrong. This section should help visitors find a path and reach the CTA quickly. It is not an image exhibition.

One glance. Quick comparison. Direct CTA.

REQUIRED BASELINE

- Use the image-led card composition shown in the approved Visual Book.
- Keep the full range easy to scan at one glance on desktop.
- Different card sizes may be used to create hierarchy.
- Mobile may use consistent readable cards with a visible sideways cue.
- Do not force every image to pass before the heading and CTA become readable.
- The result must be: scan, identify the need and click the CTA.

USE 'YOUR' ON THE LARGE IMAGE-LED CARDS

The compact Choose Your Path selector may retain first-person wording such as 'I'm looking to protect mine.' The larger visual cards should speak directly to the visitor: 'Protecting Your Family', 'Protecting Your Income', 'Medical & Health Preparation', 'Planning for Your Future' and 'Wealth & Legacy'. Apply the same second-person logic to any additional life-needs card.

Any alternative interaction or wording change must be raised with D'Life before implementation and must preserve the same quick-scan result.

Keep the route. Correct hierarchy, typography and spacing.

WHAT IS WRONG

- The section label is too small and disappears.
- The slogan carries more weight than the section identity.
- The sentence mixes type families and presentation-style emphasis.
- Excessive empty space makes the homepage feel stretched.

REQUIRED CORRECTION

- Make the section identity readable first.
- Use the approved type roles.
- Keep the section concise and calm.
- Follow the insurer-neutral wording in the approved Guide.

Keep the two-founder presentation. Correct the reading hierarchy.

CONFIRMED DIRECTION

- Homepage line: 'Founded by sisters. Built with purpose.'
- Sharon Cheang - Founder
- Rachel Cheang - Co-Founder
- Keep the homepage introduction short and link to the full About story.
- Do not let a slogan overpower the section label.
- Use the approved typography without mixed families inside one thought.

CONFIRMED: D'Life has two founders. Do not reduce it to a single-founder story.

Selected stories on the homepage. Full library deeper.

QUANTITY AND ROLE

- Use 3 to 5 featured videos on the homepage.
- Keep the remaining videos on the deeper video or story page.
- The homepage must tease and hook. It must not become the media hub.
- Keep playback inside the D'Life website.
- Provide a clear 'View All Stories' route.

INLINE PLAYBACK ONLY

The active video plays inside its own card. Do not open a blurred background, lightbox, overlay or semi-detached viewing space.

The centre card becomes active without leaving the homepage section.

WHEN THE SECTION ENTERS VIEW

- Start with a compact horizontal row of video cards.
- Keep one centre card active and visibly larger than the side previews.
- When the section enters view, activate the centre card and start playback muted.
- Show a clear Muted state and an obvious Unmute control.
- Enlarge only relative to the secondary cards.
- Keep the active video inside its own box and inside the homepage section.

Show clearly that more videos exist and rotate them one position at a time.

ROTATION AND CONTROLS

- Provide Play/Pause, Previous and Next controls.
- Use arrows, dots, partial next-card visibility or another clear carousel cue.
- When the active video finishes, rotate forward by one position.
- The next video enters the centre, becomes larger and starts muted.
- The completed video moves to a smaller secondary position.
- Continue through the selected set without forcing page scrolling.
- If autoplay is blocked, show a poster and a clear Play control.

Three sections. Three different jobs.

GROW WITH D'LIFE

Standard main career route. Focus on career exploration, mentorship and real advisor stories.

CHANGE THE PUBLIC SECTION NAME TO 'DVA - DRIVE VALUE ASSOCIATES'

Use the full confirmed name wherever this section is presented publicly. Keep the section visibly smaller, contained and selective. Present leadership, values and professional growth. It must not resemble open public recruitment. Use the approved Visual Book as the reference for the compact treatment.

YOUTH COMMUNITY

Use a larger, more public-facing section. Keep 'Youth Community' as the primary heading. Include both email signup and WhatsApp updates through a clear Stay in the Loop route.

Redesign for each device. Do not compress desktop.

REQUIRED CORRECTIONS

- Recompose the mobile header. Do not squeeze the desktop header into one row.
- Show a visible next card, arrow, dots or swipe cue where content continues sideways.
- Do not convert normal downward scrolling into unexpected sideways movement.
- The opened menu must use the approved typography and spacing.
- Persistent WhatsApp must not block content.
- Reduce unnecessary vertical gaps.
- Different sections may use different heights.

Keep contact persistent, contextual and easy to use.

PERSISTENT WHATSAPP

Keep a restrained WhatsApp control throughout the page without blocking content. Use contextual pre-filled messages for client and policy, career, Youth Community and other approved routes.

CONFIRMED ROUTING

Monday-Friday, 9:00am-5:30pm: 016-236 2286.

After office hours and weekends: 016-661 6083.

Use the approved routing for client/policy, career and Youth enquiries. DVA routing remains subject to confirmation.

OPENED MENU

The opened menu must use the same Lora and Work Sans system, hierarchy and spacing as the homepage. It must not introduce another type family or presentation style.

Use the approved palette without turning every page into the same green box.

Primary teal
#174A45

Deep green
#1D4B3E

Dark teal
#0F332C

Copper
#B36B43

Dark copper
#9C5A37

Bronze
#A88752

Ivory
#F6F1E8

Sand
#D0BFA9

Cream
#EFE8DA

Charcoal
#2F3532

Follow the palette distribution, contrast and colour hierarchy shown in the approved Visual Book. Do not introduce unrelated colours.

Final content rules before implementation

These points complete the homepage correction direction without creating new homepage branches or unnecessary production work.

FAQ MAY BE FULLER

Because the FAQ sits near the end of the homepage, it may include enough detail to answer genuine visitor questions. Keep it organised, easy to scan and mobile-friendly through a clear accordion structure. Avoid repetitive filler, but do not shorten useful answers merely to make the section small.

CORPORATE STAYS INSIDE SOLUTIONS

Keep corporate and employee protection discoverable inside the broader Solutions category. Do not create a separate homepage path, navigation pillar or standalone homepage section unless D'Life later directs otherwise. This placement is already stated in the approved Brand, Website Direction & Implementation Guide; refer back to that book when building the Solutions structure.

SIGNUP + PUBLISHING CONTROLS

Before launch, confirm where Youth Community signup information is stored, who owns and manages the list, suitable privacy or consent wording and the unsubscribe method. Publish only specific images, videos, testimonials, participant material, logos, awards, statistics and professional evidence approved for that exact use.

Use the approved system across the whole website

The homepage is the first implementation priority, but the same approved visual language and working process apply to every deeper page.

DEEPER PAGES MUST FOLLOW THE SAME BASELINE

Use the approved Visual Book as the baseline when creating the relevant Solutions, About, Career, DVA, Youth Community, Story, FAQ and other deeper pages. Keep the same Lora and Work Sans system, spacing logic, colour hierarchy, section treatment and overall design language. Do not create a new visual style for each page.

KEEP SECTION RHYTHM PURPOSEFUL

Do not apply the same oversized vertical gap or section height across the whole website. Different sections have different jobs and should use different amounts of space. Premium whitespace should support reading and flow, not create dead space or make the homepage feel stretched.

RAISE GENUINE CONSTRAINTS BEFORE CHANGING THE DESIGN

First attempt to implement the approved treatment properly. If a genuine UX, accessibility, mobile, WordPress, maintainability or technical constraint remains, contact D'Life immediately, explain the issue and proposed solution, and wait for approval before introducing an alternative.

Confirm the operational items that remain unanswered.

- ☐ Backup frequency, location and restoration responsibility
- ☐ Security monitoring, incident response and uptime responsibility
- ☐ WordPress core, theme and plugin update responsibility
- ☐ Compatibility testing, staging and regression checks
- ☐ Administrator access, training, handover and documentation
- ☐ Hosting, domain, SSL, plugin and paid-asset renewals
- ☐ Post-launch support period, response channel and boundaries
- ☐ Who maintains the website after support ends

Protect the remaining rounds with a clear pre-work agreement.

BEFORE IMPLEMENTATION

- Review this report and both approved books.
- Mark each item: Will implement / Needs D'Life decision / Technical concern.
- Explain technical concerns before work begins.

WORK CONTROL

- Do not replace an approved treatment from the two approved books, this report or later written D'Life decisions without prior approval.
- Do not create additional concepts or fees without written approval.
- Required corrections cannot be labelled pending because they were not completed.

SUBMISSION GATE

- Check desktop, tablet and mobile before submission.
- Pending is limited to D'Life decisions, unconfirmed assets or agreed future work.
- Design defects and omitted corrections remain incomplete.

Please confirm in writing that a submission which materially omits agreed corrections or departs from the approved baseline without prior approval will be treated as an incomplete correction submission rather than a completed revision round.

Map the visitor journeys before deeper-page build

The quotation provides for an approximately 14-page WordPress website. D'Life has organised the approved visitor journeys and drafted the following proposed launch structure. It remains subject to final page-count clarification and practical implementation discussion with Edge Point before it is treated as the locked sitemap.

PAGES 1-7

- 1. Home
- 2. Solutions
- 3. Protecting Your Family
- 4. Protecting Your Income
- 5. Medical & Health Preparation
- 6. Planning for Your Future
- 7. Wealth & Legacy

PAGES 8-14

- 8. Existing Policy & Claims Support
- 9. About D'Life & Founders
- 10. Career / Grow With D'Life
- 11. DVA - Drive Value Associates
- 12. Youth Community
- 13. Stories & Resources
- 14. Contact

IMPLEMENTATION RULES

Each of the five life-needs cards must lead to its own relevant destination. Corporate and employee protection stays inside Solutions with its own section, anchor and contextual CTA. Combined launch pages must be built as modular sections so D'Life can separate them later without rebuilding the website. Stories & Resources should use reusable WordPress templates for videos, articles, news and events.

Before deeper-page implementation continues, Edge Point must map this draft against the approximately 14-page package and confirm which items count as designed pages, reusable templates, archives, managed content entries, and utility, legal or system pages.

Correct the baseline and show real progress

The next submission must both correct the current homepage and demonstrate meaningful progress on the wider website using the same approved system.

PART A - CORRECT THE HOMEPAGE BASELINE

Address every required correction in this report.

Check the same working prototype across desktop, tablet and mobile.

Do not introduce unexplained departures from the two approved books.

Raise genuine UX, accessibility, mobile, WordPress, maintainability or technical constraints before an alternative is designed, built or presented in a prototype.

Do not report the issue for the first time during the prototype review.

Provide a short correction matrix: implemented, D'Life decision required, or agreed future phase.

PART B - SHOW WIDER WEBSITE PROGRESS

Map the drafted 14-page structure against the agreed package.

Show representative deeper-page designs using the same Lora and Work Sans system, colour hierarchy, spacing logic and design language.

Show CTA destinations and one-to-two-click routes to relevant actions.

Confirm navigation, internal linking, SEO implementation, CTA and enquiry tracking, WhatsApp tracking, WordPress editing structure, and maintenance, backup, ownership and handover responsibilities.

The corrections in this report are not new concept requests. They are required to bring the submitted prototype back into alignment with the two approved books and previously supplied prototype direction. Correcting the homepage must not become a substitute for normal progress on the wider website.
